

Tools I Use To Run My Business, [Hware LLC](#).

As a **software entrepreneur** people often ask me for advice on the best online tools to use for their **small business**. So, here is an extensive list that we (**Hware**) have compiled to help you get your work done. Some of the tools we use daily, some a few times a week, some a few times a month, and some a few times a year. Most of all, we use all these tools for the following reasons:

1. It helps us become more efficient in our workflow.
2. It increases our productivity.
3. It saves us money or decreases costs.
4. Most are free or low cost.
5. We will get a Return On the Investment (ROI).

One more thing, most of these tools must pass, what we call the “**Brenda Test**.” What that means is the software tool must be very user friendly (yes, I decide if the User Interface sucks and so should you) otherwise, it doesn't make the cut. It's pretty much the same philosophy we have with our own software. We believe that software should be simple and easy to use.

Business Apps

- **Evernote**: For taking notes, especially on the go!
- **ScreenFlow**: For creating high-quality software demos, tutorials, app previews, training, and presentations.
- **Dropbox**: For sharing large files over the internet.
